

Security

1. Rate-limit , prevent ddos and brute force approach
2. MFA, can easily apply if client need
3. Row level security, allow us to restrict data access
4. Data is encrypted in transit and in database
5. Authentication log, to track users operations
6. Consider data security, supabase SOC2 Type 2 compliant, safe to handle sensitive customer data
7. Where for api use for llm assistant, open AI tos restrict them to take our data without consent
